

AMENDMENTS TO THE SPECIFICATION

Amend the specification paragraph starting on page 12, line 20, and ending on page 12, line 23, as follows:

In Fig. 14, a further modified form of golf ball, according to the present invention, is shown at 160. The golf ball 160 is similar to the golf ball 130, shown in Fig. 12, with the exception that a central core portion 162 is hollow. Moisture migrating through a capillary 164 from the external surface 166 communicates to the hollow core portion 162 and is accumulated thereat to thereby noticeably alter the playing characteristics of the ball 160 in a manner that is noticeable upon being struck by a golf club.
